

North American Wiring

Global Tech LED

GTSOL112-G2

Typical Wiring Example

WIRING HOOK-UP INSTRUCTIONS:

- Connect specified Input power to each LED driver (check LED driver for input voltage requirements)
- Connect **LED driver #1** output to **LED module INPUT 1** (Red “+” / Blue “-”)
- Connect **LED driver #1** output Dim to **LED module CNTRL 1** (Purple “+” / Gray “-”)
- Connect **LED driver #2** output to **LED module INPUT 2** (Red “+” / Blue “-”)
- Connect **LED driver #2** output Dim to **LED module CNTRL 2** (Purple “+” / Gray “-”)
- **INPUT 0-10V** is used for 0-10Vdc dimming only

NOTE: Wire colors and electrical hook-up may vary from what is shown above

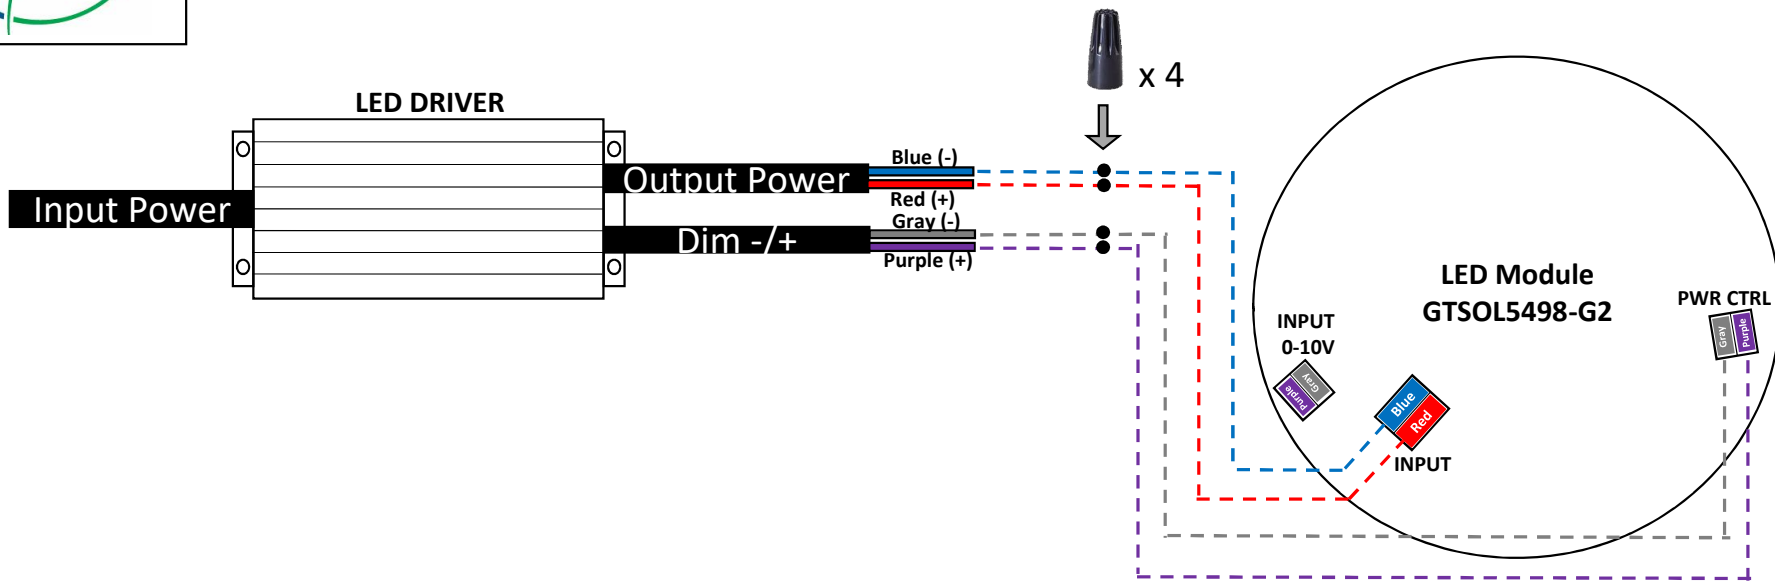

North American Wiring

Global Tech LED

GTSOL5498-G2

Typical Wiring Example

WIRING HOOK-UP INSTRUCTIONS:

- Connect specified Input power to each LED driver (check LED driver for input voltage requirements)
- Connect **LED driver** output to **LED module INPUT** (Red "+" / Blue "-")
- Connect **LED driver** output Dim to **LED module PWR CTRL** (Purple "+" / Gray "-")
- **INPUT 0-10V** is used for 0-10Vdc dimming only

NOTE: Wire colors and electrical hook-up may vary from what is shown above

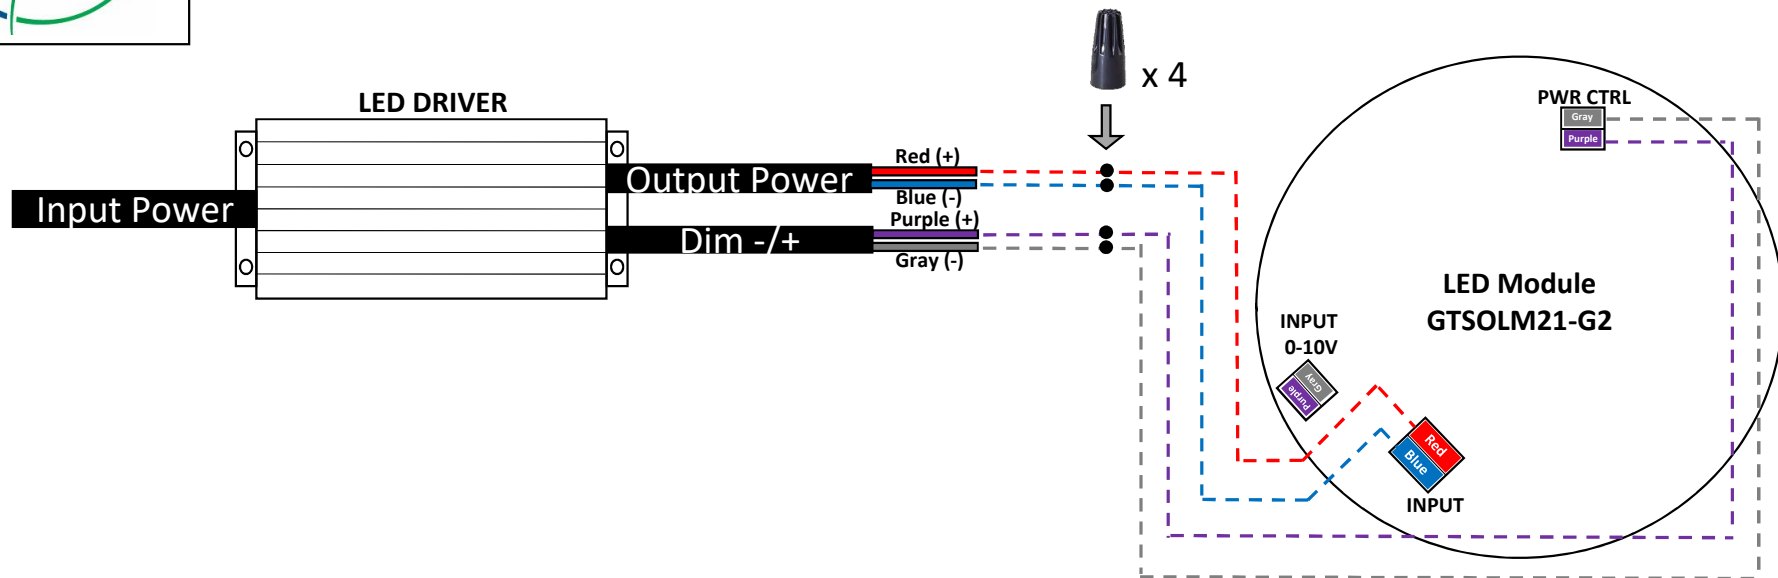

North American Wiring

Global Tech LED

GTSOLM21-G2

Typical Wiring Example

WIRING HOOK-UP INSTRUCTIONS:

- Connect specified Input power to each LED driver (check LED driver for input voltage requirements)
- Connect **LED driver** output to **LED module INPUT** (Red "+" / Blue "-")
- Connect **LED driver** output Dim to **LED module PWR CTRL** (Purple "+" / Gray "-")
- **INPUT 0-10V** is used for 0-10Vdc dimming only

NOTE: Wire colors and electrical hook-up may vary from what is shown above

European Wiring

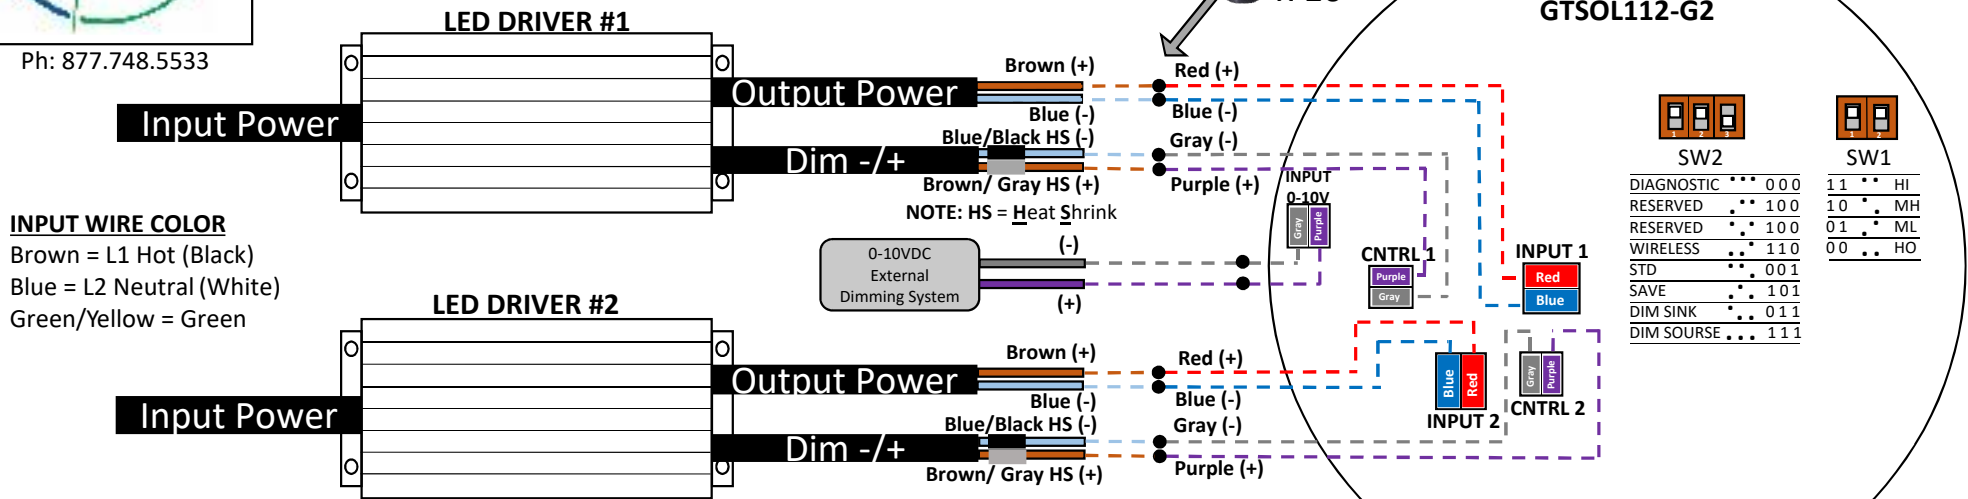

Ph: 877.748.5533

Global Tech LED

GTSOL112-G2

Typical Wiring Example

WIRING HOOK-UP INSTRUCTIONS:

- Connect specified Input power to each LED driver (check LED driver for input voltage requirements)
- ⚠ **WARNING:** Driver #1 connects to LED Module INPUT 1 & CNTRL 1; Driver #2 connects to LED Module INPUT 2 & CNTRL 2
- Connect **LED Driver 1 & 2 output Power** to **LED module INPUT** (Brown "+" / Blue "-")
 Connect the **Blue** output driver wire to the **Blue** wire from LED Module
 Connect the **Brown** output driver wire to the **Red** wire from LED Module
- Connect **LED Driver 1 & 2 output Dim** to **LED module PWR CNRL**
 (Blue with **Black Heat Shrink** "+" / Brown with **Gray Heat Shrink** "-"),
 Connect the **Blue** with **Black Heat Shrink** wire to the **Gray** wire from LED Module;
 Connect the **Brown** with **Gray Heat Shrink** to the **Purple** wire from LED Module
- **INPUT 0-10V** is used for 0-10Vdc external dimming only (See diagram above)

NOTE: Wire colors and electrical hook-up may vary from what is shown above

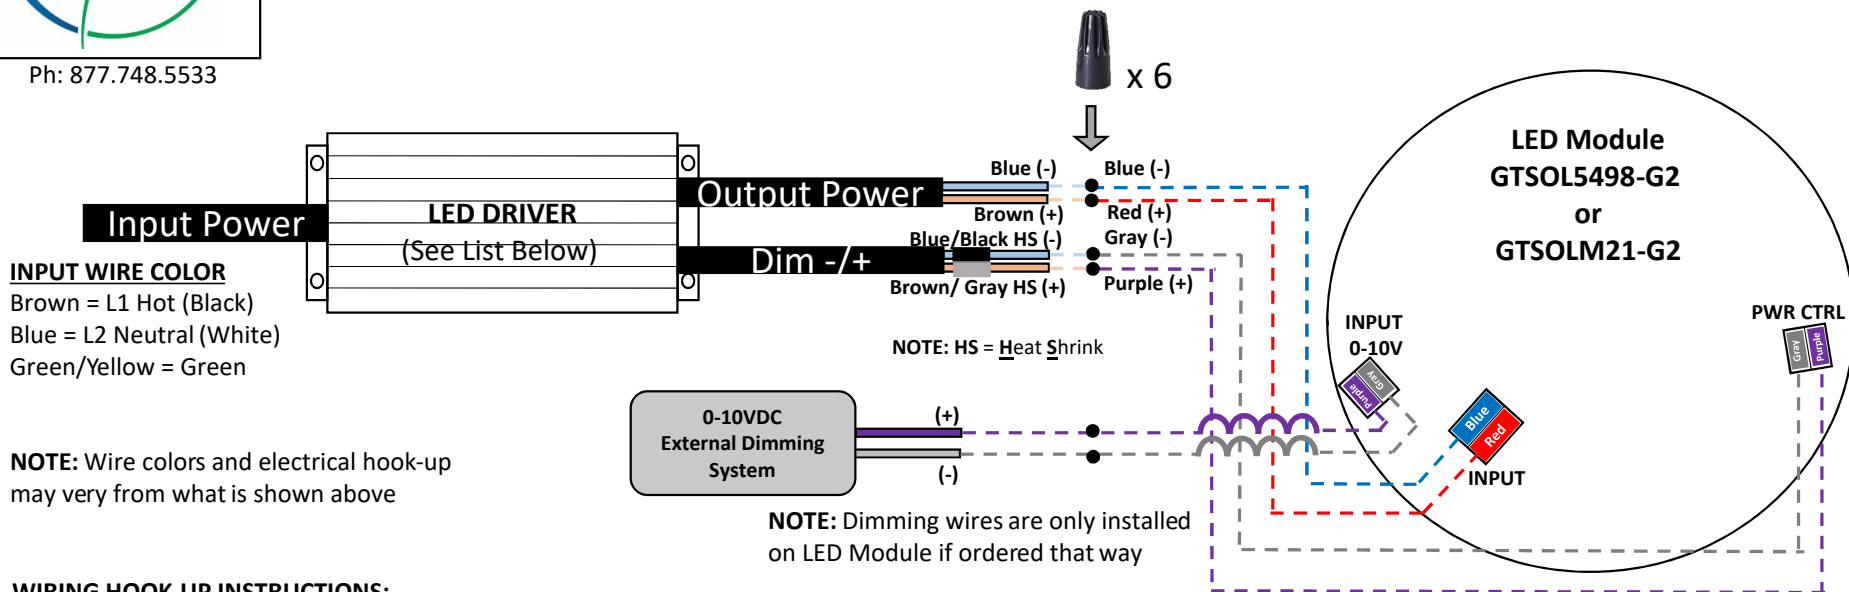

European Wiring

Ph: 877.748.5533

Global Tech LED GTSOL5498-G2 or GTSOLM21-G2 Typical Wiring Example

WIRING HOOK-UP INSTRUCTIONS:

- Connect specified Input power to each LED driver (check LED driver for input voltage requirements)
- Connect **LED driver output Power** to **LED module INPUT** (Brown "+" / Blue "-")
Connect the **Brown** wire to the **Blue** wire from LED Module;
Connect the **Blue** wire to the **Red** wire from LED Module
- Connect **LED driver output Dim** to **LED module PWR CNRL** (Blue with Black Heat Shrink "+" / Brown with Gray Heat Shrink "-"),
Connect the **Blue** with **Black Heat Shrink** wire to the **Gray** wire from LED Module;
Connect the **Brown** with **Gray Heat Shrink** to the **Purple** wire from LED Module
- **INPUT 0-10V** is used for 0-10Vdc external dimming only (See diagram above)
